

Principal Engineer & Engineering Manager with **15+ years of focused experience** building and scaling product systems at scale. Specializes in mobile architecture and engineering system design. Leads cross-functional teams, drives production-grade reliability, and **improves developer velocity** through platform engineering and automation across **international and local markets**. Open to engineering leadership tracks at product-first companies building at scale.

Outreach & Community Impact

- Stackoverflow Global Expert

Earned **over 125K** reputation. Reached **22M+ developers** solving technical challenges. **Top 0.01%** contributor for **6+ years**. Ranked **world-wide #2 SwiftUI**, **#10 Swift**, **#30 iOS**.
- Open Source Contributions

Contributed to **+20 repositories** with **over 30K combined stars** on GitHub. Core maintainer of repos with **over 1K combined stars** such is `iPhoneNumberField`.
- Technical Mentorship

Mentored **1,000+ individual developers** on `Exercism`, `MFT`, `ADPList`, and more for **10+ years**.

Professional Experience

Mobile Products Director & Principal Engineer Mar 2021 – Present

Orchid Pharmed (Amara & Axon) — Healthcare, Wellness & Online Visit

- Progressed from technical consultant to **engineering leadership** across **international** and local healthcare platforms.
- Led **cross-functional** teams of **12 direct reports** spanning **Engineering**, **Product**, and **Design**, delivering multiple **mobile native apps** along with their web counterparts, including back-office and clinic-facing systems.
- Reduced developer onboarding time **from 3 weeks to 3 days** by standardizing engineering documentation and workflows across Jira and Confluence.
- Eliminated API design conflicts by **redesigning API contracts** and introducing OpenAPI standards across teams.
- Improved product consistency and delivery velocity by establishing **design system practices** across teams.
- Delivered core healthcare capabilities including telehealth (online visits) and appointment booking, while remaining **hands-on in iOS** architecture and development serving thousands of users across multiple counties.
- Built and scaled engineering teams through technical hiring, team leveling, and **performance calibration**.
- Standardized engineering and product delivery practices across multiple teams and product lines by implementing **automated Jira workflows** and **CI/CD pipelines**, reducing friction in handoff and delivery.

Staff iOS Engineer (Contract) Mar 2024 – Dec 2024

Writey B.V. — Handwriting Training

- Delivered multi-year technical milestones in **under 10 months** through backlog optimizing and plan execution.
- Cut debug build time **from 11 minutes to under 1 minute** by optimizing asset management and build configuration.
- Reduced force-update frequency and time-to-market by designing full dynamic **server-driven data architecture**.
- Stabilized rendering performance at **120 FPS** by offloading compute-heavy operations from the main thread.
- Eliminated **1 day delay** design delivery by building a custom Figma-to-Swift asset generator for handwriting assets.
- Improved app stability to **near-zero crash rate**, placing the app in the top **0–25%** App Store stability tier.
- Reduced input latency by removing **~2 seconds** of drawing delay, improving real-time interaction responsiveness.
- Enhanced **accessibility features** through full support for dark mode, dynamic type, and screen reader compatibility.

Fractional CTO

Jun 2023 - Sep 2023

Rem · Wellbeine Co. — Sleep Analytics with Apple Watch & iPhone

- Reduced operational workload by **30% in 2 months** by automating Jira workflows and CI pipelines.
- Introduced a standardized performance evaluation framework to calibrating team performance **within 1 month**.
- Built an **automated code review**, reducing issue resolution cycles by **~30% with zero additional infrastructure cost**.
- Reduced event tracking cycle time by **40%** through redesigning data flow architecture.
- Rebuilt localization system, reducing UI handoff overhead by **18x** compared to the existed translation workflow.
- Reduced execution time **from 2 minutes to under 0.2 seconds** in stress scenarios through asynchronous execution architecture and performance-critical refactoring.
- Led crash triage and stabilization efforts, driving crash-free metrics into the **top quartile** of App Store benchmarks.

Lead iOS Engineer

Mar 2020 - May 2022

Alibaba Travels — Travel & Tourism Online Booking Platform

- Reduced overall clean build time by **98% (from 12 minutes to 15 seconds)** by applying true micro-apps architecture.
- Dropped cold app launch time **from 9 seconds to ~1 second** through library-level optimizations.
- Cut first responsive frame duration **from 25 seconds to 3 seconds** by refining startup events in all platforms.
- Improved calendar-search responsiveness **from 20 seconds to almost instant** by implementing a custom local cache with a smart lazy synchronization system. Also caused a huge reduction in API calls on average.
- Reduced release overhead by **6x** and improved release reliability by automating a previously manual multi-store delivery process into a **unified one-click pipeline** across different store (SibApp, Anardooni, etc.) and TestFlight.
- Rewrote the Train Booking funnel from scratch using SwiftUI, Combine, and TCA, leading **end-to-end development** independently while **collaborating with cross-functional teams**.

iOS Application Lead Engineer (Contract / Parallel)

Mar 2020 - Dec 2020

Blu Bank — First Neo-Banking Solution of The Region

- Led the iOS team delivering **v1.0** first neo banking super-app from scratch through financial-grade security audits.
- Created **developer tools** such as UIKit Live Preview and DesignKit framework that reduced delivery time by **50%**.
- Implemented high-security features and low-level frameworks such as **custom encryption**, NFC and biometrics.

Additional Experience (Summarized)

2010 - 2020

Selected Companies: Peeyade, Ressa, Hamgaman, Hamloo, TripeMa (Jabama), Lahzenegar, and SGGroup

Initially joined most teams as an iOS Engineer, later expanding ownership into architecture, TPM, UI/UX, API design, infrastructure, and cross-functional technical leadership based on product needs.

Delivered solutions across healthcare, travel, logistics, and live-streaming products, including HIPAA-compliant telemedicine systems, low-latency VoIP and streaming infrastructure, fraud prevention systems, offline-first mobile architectures, and forward/backward compatible APIs.

Education:

B.Sc. In Information Technology Engineering

Islamic Azad University | 2011 - 2015

Core Skills:

Languages: Swift Objective-C Kotlin JS Frameworks: SwiftUI UIKit Combine KMP XCTest
Arch: Micro-apps TCA Viper Clean MVVM Tools: Jira OpenAPI Instruments Figma Rive
Infra: CI/CD GitHub Actions GitLab CI Xcode Cloud Firebase Amplitude Branch Apple Ads.
